The Secret of Achievement

IT DOES SEEM that any accomplishment worth while depends a great deal on getting started right and then keeping at it. That is true in many things and very true in GARDENING.

Why not grow a garden this year? There is no substitute for the superior flavor and goodness of vegetables grown in your own garden. Also, think of the good you get from the sunshine, the exercise and the fun of just watching things grow. We all know that certain foods will be scarce during the coming months. The demand for fresh vegetables, berries and other small fruits will thus be greater, and we can help this demand by having our own VICTORY GARDEN. Food is vital to our nation, so do your share for Victory.

Victory Gardens vs. Appetite Appeal

Whether you decide to set out only a few plants or sow only a few rows, you will learn there is no substitute for the superior flavor and goodness of vegetables grown in your own garden. What you grow will help provide the vitamins and minerals so necessary to keep up our health program. To be physically fit, mentally alert, and on the job at all times, a well balanced diet, including plenty of fresh garden vegetables will provide the necessary energy. A garden will make one feel he has a personal part in the VICTORY program. It is up to us to feed ourselves now and a starved world later on. The average city garden will do well to conserve its beauty of lawn, flower bed border and restrict its food production to such easily grown vegetables and small fruits that will take small space and a minimum amount of care.

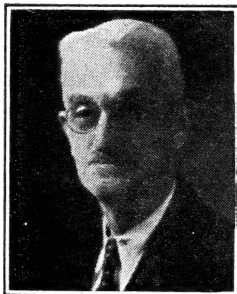

Victory Gardens vs. Eye Appeal

With extra emphasis being placed on the planting of vegetables and small fruits in the Victory Gardens this season,

we must remember to plant flowers as well. All utility (in the form of vegetables) with little or no beauty supplied by flowers does not constitute a well balanced Victory Garden.

Flowers are needed to make and keep up the appearance of the home; for cut flowers in the house, church, hospital, school and for the success of any well planned VICTORY GARDEN. New gardeners obtain a quick and colorful showing by the planting of annuals.

In the following pages you will find the best vegetable and flower seeds available, together with many other items suitable for the garden. Send us your order early so you will have the things you need on hand. With what you save from your VICTORY GARDEN—BUY WAR BONDS AND STAMPS.

"We give no warranty, expressed or implied, as to the productiveness of any seeds or bulbs we sell, and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed." Adopted by American Seed Trade Association, June, 1942.

One ounce will produce 500 plants.

GREEN GLOBE. Large; heads are used; requires long season. Pkt. 15c; oz. 80c.

ASPARAGUS

One ounce to 60 feet of row.

Asparagus is a slow grower, requiring at least three years to mature from seed, and is therefore not generally recommended to the small gardener. Usually unless you go into Asparagus raising on a large scale, it is better that you get the roots in preference to raising from seed.

Mary Washington Rust-Proof Is green with pinkish tint at bottom. Our seed is direct from pedigreed stock which is practically rust-proof. This will eventually supersede all other varieties. Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00.

ASPARAGUS ROOTS

MARY WASHINGTON RUST-PROOF.

1-year-old roots. Doz. 35c; per 100 \$1.15, postpaid. 1000 1-year roots, not postpaid, \$7.50.
2-year-old roots. Doz. 45c; per 100 \$1.35, postpaid. 1000 2-year roots, not postpaid, \$9.00.

NEW PARADISE. Produces normal crop one year earlier than other varieties. Large, crisp, tender stalks with exceptionally fine flavor. Rust resistant. 2-year-old roots. Doz. 60c; per 100 \$3.00, postpaid.

BEANS, GARDEN - DWARF

One pound will plant 100 feet, 60 pounds an acre.

Bush Beans should be planted about the last of May. The furrows should be at least 2 feet apart. A pound of wood ashes should be hoed into every 10 feet of furrow, leaving the furrow not more than an inch deep. Plant the Beans 4 inches apart in the furrow and cover them with an inch of soil. They come up in from 8 to 10 days, and the plants mature in from 6 to 9 weeks. Thorough tilling is essential; the ground must be kept soft. Avoid handling or touching the vines in damp weather.

When Bean beetles trouble, pick off all you see, then use Arsenate of Lead.

NITRAGIN INOCULATING BACTERIA will increase your Bean crop. Trial size 10c; ½ bu. or 30-lb. size 25c; 1 bu. or 60-lb. size 35c, postpaid.

PRICES—All the following varieties, unless priced otherwise:
Pkt. 5c; ¼ lb. 10c; 1 lb. 35c; 2-lb. pkg. 65c; 5-lb. pkg. \$1.50; 10-lb. pkg. \$2.75.

CABBAGE

Three ounces of seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet apart between rows. Cultural leaflet on request.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Soil for Carrots should be particularly well tilled before they are planted.

Early Danish Perfection

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2,000 plants. All our Danish seed is growers' first quality sifted, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Treat the seed with Semesan.

Early Danish Perfection Snowball "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. Pkt. 25c; ¼ oz. \$1.25; oz. \$4.00.

Late Snowball or **Dry Weather.** A popular strain for late crop. Danish grown sifted seed. Pkt. 25c; ¼ oz. \$1.25; oz. \$4.00.

CAULIFLOWER PLANTS

SNOWBALL. Early, ready in April. By mail: Doz. 25c; per 100 85c. Not postpaid, see page 11.

HOTKAP PROTECTORS. Will save your early plants from frost. Home Garden Package, consists of 25 Hotkaps with a special paper setter, all for 50c; by mail 60c. For larger quantity, see page 11.

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 30,000 plants to the acre. Cultural leaflet on request.

Golden Self-Blanching "Dependable Grade." The choicest sort of delicious Celery; produces large bunches with broad, heavy stalks which blanch into a rich, appetizing golden yellow, making this the most popular golden Celery on the market. Dwarf type. Pkt. 10c; ¼ oz. 20c; oz. 65c; ¼ lb. \$2.00; 1 lb. \$5.00.

GIANT PASCAL. Standard market sort for winter use. Pkt. 10c; oz. 40c; ¼ lb. \$1.25; lb. \$3.50.

CELERY PLANTS

Early varieties ready May 20th. Doz. 25c; 100 for 75c; all postpaid. Late Celery plants quoted in June. F.O.B. Denver prices on page 11.

CELTUCE

A vegetable combining the uses and flavors of celery and lettuce. Introduced by Burpee last season. Pkt. 15c; ¼ oz. 35c; oz. \$1.25.

CHIVES - Schnittlauch

A member of the Onion family. Hardy. The seed grows readily. A packet makes a suitable home supply. Pkt. 10c; ¼ oz. 35c; oz. \$1.00. The growing plants are in bunches that can be divided. Per bunch 25c each, postpaid.

CHICORY

LARGE-ROOTED. For salads, also roots for a coffee drink. Pkt. 5c; oz. 30c; ¼ lb. 90c.

WITLOOF-Brussels. True French Endive and very best variety. Pkt. 5c; oz. 40c; ¼ lb. \$1.25.

COLLARDS

GEORGIA, or SOUTHERN. The standard variety for greens. Pkt. 5c; oz. 10c; ¼ lb. 30c.

CORN SALAD

Used for greens, like Spinach, or a salad. Very hardy, thus can be sown in fall or spring. Pkt. 5c; oz. 35c; ¼ lb. \$1.00.

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump.

Prices for each of the following five varieties: Pkt. 5c; ¼ lb. 10c; 1 lb. 30c; 2-lb. pkg. 55c; 5 lbs. \$1.25.

Early Golden Bantam

"Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden yellow color. It can be planted very early; is hardy. The small stalks grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

Country Gentleman

Shoe-peg kernels. Medium large, early canning variety. Sweetest of all. Supply very limited.

STOWELL'S EVERGREEN.

Large, late, sweet, popular home garden sort. Very heavy producer.

HYBRID VARIETIES SWEET CORN

The result of hybridizing gives us seed that produces very early, deliciously sweet and remarkably uniform ears—just what every home garden wants. Make two or three plantings, 10 to 14 days apart, then you have corn through a prolonged period, fresh from your garden to the table.

GOLDEN CROSS BANTAM HYBRID. An improved hybrid. Ears are about 8 inches long, running 10-, 12- and 14-rowed. 85 to 88 days. Best for home garden. Plant at intervals of two weeks.

EXTRA EARLY BANCROSS. A very early hybrid, averaging 12-rowed. Yellow Bantam type. Two ears to a stalk. 78 days. Either Variety: Pkt. 5c; ¼ lb. 15c; ½ lb. 25c; 1 lb. 45c; 2-lb. pkg. 85c; 5-lb. pkg. \$1.80.

CORN, POP

SOUTH AMERICAN. Also known as New Golden Giant, T.N.T. and other names. Yellow seed, producing jumbo kernels. A very delicious Popcorn. In fact, the most popular in our market.

JAPANESE HULLLESS. Small, long kernels, much liked, since it is practically hullless.

SPANISH. Very large, smooth kernels, yields well.

Prices for all varieties: Pkt. 5c; ¼ lb. 10c; ½ lb. 15c; 1 lb. 25c; 2-lb. pkg. 45c; 5 lbs. \$1.00.

MARKET GARDENERS SHOULD WRITE US ABOUT THEIR WANTS

Curled. Pepper Grass for garnishing with Parsley. Pkt. 10c; oz. 30c; ¼ lb. 90c.
Water Cress. Grows in running water. Pkt. 10c; ¼ oz. 20c; oz. 65c.

CUCUMBERS

One ounce will plant 50 hills. Two pounds will plant an acre.

Dig holes at least 5 feet apart. They should be a foot wide and 5 inches deep. Fill each hole to within an inch of the top with equal parts of sand and well-rotted stable manure thoroughly mixed. Scatter at least 10 seeds in it, well apart, and cover them with half an inch of fine soil, pressing it down. From the middle to the last of May is planting time. Thin out to 3 plants to a hill. Our seed is all Colorado-grown. Use **SEMESAN POWDER** on your Cucumber Seed to increase germination and prevent leaf blight. "**ROTKAPS**" are excellent protectors from late frosts. Have them ready for your cucumbers.

Clark's Special Deep Green OR WOODRUFF HYBRID. "Dependable Grade." This strain is the result of years of selection. Averages 8 to 10 inches long, which is a good marketable size. Being very dark green-skinned, and white inside, with uniform shape, it is very popular. We heartily recommend it. Pkt. 5c; oz. 20c; ¼ lb. 65c; 1b. \$2.00.

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Varieties will plant 400 feet of row. Two pounds per acre.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy.

*These varieties form heads.

***New York or Wonderful** "Mountain Iceberg," Dark Iceberg, also called Los Angeles Market, "Dependable Grade." This grand lettuce we believe to be the finest in cultivation. A wonderful heat-resisting lettuce and slow to run to seed; mammoth heads, like small cabbages, bright green. Our seed is direct from certified stock grown in California by Rohmert. Pkt. 5c; oz. 20c; ¼ lb. 60c; 1 lb. \$1.75.

Pkt. 5c; oz. 20c; ¼ lb. 65c; lb. \$1.90.

Muskmelon planting and cultivation throughout are the same as those used in raising Cucumbers. Is considered rather delicate for northern latitude, but with care can be successfully grown. TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of any other crop. Dig holes 3 feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent disease.

WILT-RESISTANT VARIETIES

This class of tomatoes is especially desirable where blight and wilt affects the ordinary varieties. In any event they are good producers or remarkably perfect fruit.

Marhio or **MARVELOUS**. 80 days. A new pink fruited sort developed by the Ohio Agricultural Experiment Station. Is practically wilt-resistant and very productive, under glass or in open field. **Pkt. 10c; oz. 40c; ¼ lb. \$1.25.**

The Pritchard 73 days. (Scarlet Topper.) The last wilt-resistant variety being developed by Prof. Pritchard of Washington, thus named in his honor. Medium early, smooth and solid, of scarlet color. Sets heavily, thus produces well. **Pkt. 10c; oz. 40c; ¼ lb. \$1.25.**

Marglobe 80 days. A variety brought to popularity by seed distributed from Washington. Is bright red and very round. Slightly later than Earliana but larger. The bearing season is long, thus especially suitable for home gardens. Much liked by canners. In New Jersey they claim nothing better in tomatoes. A truly wilt-resistant variety. **Pkt. 5c; oz. 35c; ¼ lb. \$1.00; 1 lb. \$3.00.**

Cleome, Pink Queen

Morning Glory, Pearly Gates

A well balanced Victory Garden should have some flowers to supply beauty in the yard and picking flowers for the home. So why not try some of the new developments in the flowers that have won All-America recognition.

Petunia, Igloo (Bronze Medal, 1943.) A very compact, creamy white, heavily flowered variety that seems to be appropriately named now that some of our military forces are stationed in Alaska where igloos are found. It is an exceptionally good Petunia. Suited for borders or edgings of walkways, drives or in the garden. **Pkt. 25c.**

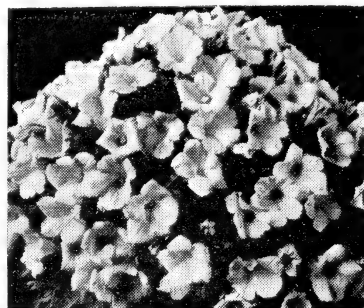

Petunia, English Violet (Honorable Mention, 1943.) This very free flowering Hybrida provides a distinct new color, rosy-mauve-violet. Uniform, true, continuous flowers of two inches on 12-inch plants. **Pkt. 25c.**

Giant Cosmos, Dazzler (Honorable Mention, 1943.) Very rich deep amaranth-crimson flowers on plants up to five feet tall. This is distinctly superior to previous reds in flower. **Pkt., 25c.**

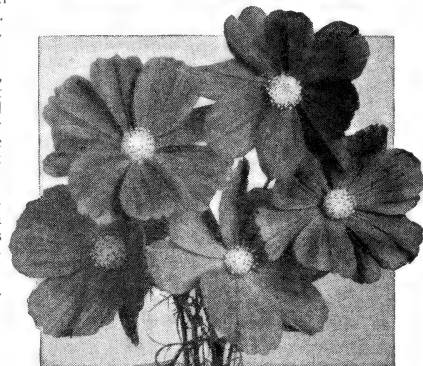

Cleome, Pink Queen (Silver Medal Winner, 1942.) Trusses of bright pink, top the long stems of this novel plant. Hardy annual easily grown from seed planted directly in the border or garden. Average height is 3 feet, particularly striking in the early evening as the petals seem to take on a sparkle not noticed in the day. **Pkt. 15c.**

Cosmos, Yellow Flare (Silver Medal Winner, 1942.) At last a yellow Cosmos which will blossom in early summer. Grows 3 to 4 feet tall and blooms freely on long, wiry stems. Excellent for border and as a cut flower. **Pkt. 15c.**

Morning Glory, Pearly Gates (Silver Medal Winner, 1942.) Flowers are a lustrous white, averaging 4 inches across. The vigorous fast growing vines are covered with flowers from midsummer until frost. Makes a wonderful companion to the Heavenly Blue. **Pkt. 15c.**

ASTERS

Annual. The queen of the summer-blooming plants. Varieties listed represent the finest Asters of the early (1), midseason (2), and late (3) types. Require a rich soil with ample water, and a sunny exposure.

ASTER WILT

The wilt disease of Asters is caused by a parasitic fungus, which may attack the plant at any stage in its growth from the seedling to the seed-producing age. The spores may be carried on the seed, on implements used in preparing the soil and the soil itself. When once introduced into the soil, it persists indefinitely and makes the land "aster sick."

A wilt-resistant strain of Asters is one which, although planted on the sick soil will withstand the attacks of the fungus and develop into strong, healthy plants, while the non-resistant strains may succumb.

Much disappointment on account of Aster Wilt has been overcome by the use of Wilt-Resistant strains.

Pansies are successfully grown from seed even by the novice; however, we recommend our blooming plants. Ready in April.

Brief Cultural Notes

ZINNIAS: These are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost is past. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3 to 4 inches tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for quite a while so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture.

GOURDS: These should be sown where the plants are to remain and should not be planted until late in the spring after the soil is thoroughly warm and nights as well as days are warm. For best results sow in a warm, sandy location, somewhat on the dry side. Provide enough water for a normal growth until the flowers appear, after which no further heavy irrigation is necessary. Heavy watering during the flowering period will cause dropping of flowers and buds, and consequently loss of gourds. For perfect shaped specimens, vines should be trained up on a fence or trellis and the gourds allow to hang, thus assuring straight necks and preventing rotting or discoloration from the soil. Do not harvest the gourd crop until the fruits are thoroughly matured. This will be when the stem becomes brown and hard and pressure with the fingernail cannot dent the shell of the gourd. After picking, gourds should be hung in an airy, dry place until thoroughly cured. The large, hard-shelled varieties are then washed and scrubbed before decorating. The small, colorful varieties are wiped clean of dust and given a light coating of varnish or shellac. If thoroughly dried before treatment, gourds should last several months for house decoration.

MORNING GLORIES: Never plant until the soil is thoroughly warm. If it is too cool the seeds will rot instead of germinating. To aid germination of particularly hard-seeded varieties, filing a notch at the top of the seed will help considerably. Select the driest, sandiest part of the garden and sow where the plants are to flower as the Morning Glories resent transplanting. Keep on the dry side; heavy watering induces foliage growth at the expense of flowers. A poor soil is preferable to a rich one.

SUPERB GLADIOLUS

**MORE POPULAR THAN
EVER—ALL POSTPAID**

The Gladiolus are the most attractive and useful cut flowers of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first flower buds show color; then, if kept in water each successive bud will develop and thus prolong the blooming many days.

The planting season starts in April, and continues until in June, at intervals of 2 weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully 6 inches deep. Water freely.

A very complete **Cultural Leaflet on Gladiolus** free with orders upon request. To eliminate Aphis and Thrip treat with Semesan, or Corrosive Sublimate, and store with Naphthalene Flakes.

Caution Be sure and treat all Gladiolus Bulbs before planting. The past few years there has been great damage caused by Gladiolus Thrips. They injure the foliage and unfolded buds so that they do not open. Be on the safe side, whether planting new stock or bulbs saved from previous year, treat the bulbs just before planting. Semesan or Lysol are very effective treatments.

SEMESAN. 2-oz. can, with full directions, 35c, postpaid.

LYSOL. May be obtained from any drug store. **Directions:** Use one teaspoonful to a quart of water. For large lots, use one pint to 25 gallons water. Heat this solution to about 90 degrees. Put the bulbs (in thin cloth bags) into solution. Let remain for 8 to 10 hours. Solution need not be kept up to 90 degrees, but keep it and the room warm while bulbs are soaking. Do not heat solution hotter than 90 degrees, somewhat less will do, but solution must be warm and room warm to get best results.

Ampelopsis Engelmanni—Clinging Ivy. Is very quick-growing. Its glossy, light green foliage clings to brick, stone or wood, changing to a beautiful crimson in fall. Usually free from insects. Bittersweet An old popular climber with glossy foliage and large clusters of orange-crimson berries that remain all winter. Berries are much admired for winter indoor decoration. To produce berries, two plants should be planted so flowers may become cross pollinated. Each 50c; by mail 60c.

Cinnamon Vine Free-growing, with small white, fragrant flowers, green, glossy, heart-shaped leaves. Not a dense foliage but very attractive. Each 10c; doz. \$1.00, postpaid.

Clematis Jackmani Large Flowering. No other climbing plant equals in attractiveness these beautiful large-flowering Clematis. They need rich deep soil, perfect drainage, though abundance of water. Their requirements are peculiar, and even then they will die occasionally. Be sure that the roots are properly spread out and earth comes in contact up under center of crown roots. Special instructions given with each purchase when asked for.

Jackmani. Violet-purple, intensely colored, giant blooms—the grandest of all Clematis. Each \$1.00; by mail \$1.10. 3 for \$2.75, by mail \$2.95.

How to Plant

The planting of balled and burlapped Evergreens is very simple. They like a good loamy soil, with drainage provided. The burlap should be left on the ball of earth and placed in the hole so that the top of ball is just below the soil surface. Usually a soil mark on the stem will show the depth it was growing in the nursery. The soil which is used to fill in around the ball should be tamped firmly. A thorough watering is very necessary after planting.

Our stock is all examined by State Entomologists and properly approved before being shipped.

Our stock is nursery grown, well rooted, well shaped and carefully dug with a ball of earth on the roots. They are ready in early March and may be planted until the middle of May. Balled and burlapped trees cannot be mailed. They are best shipped by express or truck. Prices are all F. O. B. Denver—you pay transportation charges on arrival.

Directions for Growing Conifer Trees from Seed

Pine, Spruce and Juniper seeds are very slow in germinating. To hurry germination, many propagators stratify the seeds. This is done by mixing the seed with sand or peat moss, with sufficient moisture added to prevent drying. Store the seeds in a box for a sufficient length of time to allow the germ to become well started.

The seed bed is usually eight feet wide and any length required. The ground should be very thoroughly pulverized, the seed scattered broadcast on the surface, or in shallow rows, and covered with sand or a very light sandy loam to the depth of one-fourth of an inch. Caution must be used or many seedlings may be killed by drought or by white-spot injury to the base of the stems.

Stakes should be driven at intervals on each side of the seed bed and a rail or board nailed on to support shading. The latter is best made by nailing lath on small poles ten feet long. Eight feet should be covered with lath about one-half inch apart, allowing balance of poles to project at the end. Young seedlings must be shaded on appearance.

SEEDS FOR EVERY LAWN REQUIREMENT

About Lawns

A good lawn is, without doubt, one of the important features of the home grounds or of any landscape design. It should be remembered when considering a new lawn that the cost of the seed is only a very small part of the actual investment. The labor cost is the greatest. It is thus no economy to save a few cents by buying seed of a questionable quality, only to realize the added expense in years to come of repatching and doing the lawn over and over again. We take pleasure in recommending our grades of Kentucky Blue Grass, which are the best obtainable.

For special purposes and certain locations we have made up mixtures which we feel very suitable. When you are in doubt about what seed is most suited for your particular purpose, please write us. Our leaflets give much information.

SPECIAL LEAFLETS, by C. R. Root. Each free for the asking. "How to Make a Lawn," very clear directions. "Lawn Pests," How to Eliminate.

SINGING CANARIES *American Raised*

Our birds are all strong and active. Every singer we sell has been tested and known by us as a singer. We cannot send out on trial or exchange birds. State the amount you wish to pay and leave the selection to us. The value of a bird is not in the plumage. All birds are graded as to singing qualities and range of notes.

Young birds available in August, September and October seldom have developed song, however the longer they are with same surroundings the sooner their song develops. Beginning in November you are better pleased with their song.

Birds **MUST** be shipped Express, thus give your Express Office, if different than your Post Office.

We pack and deliver to express office, Denver. They usually carry safely anywhere in the United States. We supply feed and water cups in each box.

Hartz Mountain Canaries

These are the popular singers and usually are mixed in plumage. Considered the most vigorous.

"XX" GRADE. A reasonably good song, though not great variety in notes. \$8.50.

SMALL FRUITS - - All Postpaid

These varieties are all of established merit and very suitable for our Western planters. Our stock is all examined by State Inspectors.

STRAWBERRIES

Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If in May, the leaves should be trimmed. We do not recommend fall planting.

For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June. Strawberry plants are packed 25 in a bundle. We cannot accept orders for Strawberry plants after May 10th. They are too far advanced in growth.

We cannot be responsible for Strawberry plants after they leave us in good condition.

Mastodon A very popular Everbearing variety. The giant of all Everbearings. Produces heavily in July, then renews its productiveness in August and continues until freezing-up time. The berries are very large, firm and uniformly well colored. Tests have shown 18 berries to fill a quart box. Three berries weighed 2 ounces. They have a very fragrant aroma. 25 plants for 50c; 50 plants for 85c; 100 plants \$1.50; 1,000 plants for \$12.00, all postpaid.

The New "Gem" A large round Everbearing variety that is much admired for its uniformity in color, size, and productiveness. Is earlier than Mastodon. 25 plants for 50c; 50 plants for 85c; 100 plants for \$1.50; 1,000 plants for \$12.00, all postpaid.

RASPBERRIES

ST. REGIS EVERBEARING. Produces beautiful red berries from June into September; a truly early and late variety. The "St. Regis" is in Raspberries what "Mastodon" is in Strawberries. 10 for 60c; 20 for \$1.00; 100 for \$4.00.

CHIEF. Large red. Exceedingly hardy and a good shipper. 10 for 60c; 20 for \$1.00; 100 for \$4.00.

CUMBERLAND. The largest Black Raspberry. Very prolific and ripens early. 10 for 85c; 20 for \$1.50; 100 for \$5.50.

BOYSENBERRY
